## Unfitted on larger paper

`forest` with `terminal tree`

Keep 10pt labels by choosing paper large enough for the unscaled tree.

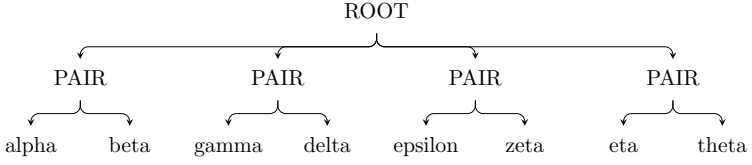

Frame: text area (150mm wide). Paper: 220 by 140mm. Side margins: 35mm. You set the paper size in LaTeX. Neither environment changes it.

## Fitted on smaller paper

`fittedterminaltree`

The tree shrinks uniformly to fit the text width. The page margins do not change.

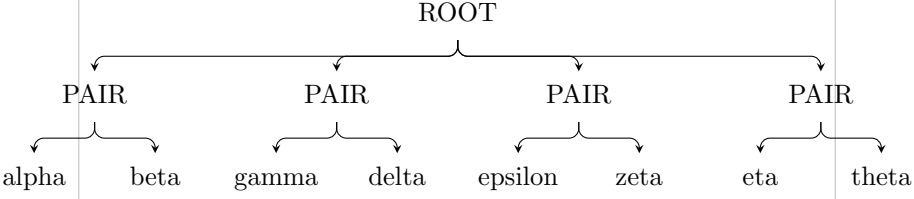

Frame: text area (100mm wide). Paper: 170 by 140mm. Side margins: 35mm. Labels and branches scale together without dropping below the minimum label size.

## When the page is too small

`forest` with `terminal tree`

The same unscaled tree on the smaller paper extends into the margins.

This is a deliberately unsuitable page size, not a different tree layout. Choose larger paper or use fitting.
